DETAILED ACTION

Claims 4, 7, 10, 13, 16 are currently pending and are present for examination.

Applicants' amendments and arguments filed on 3-19-04, have been fully considered and are deemed to be persuasive to overcome the rejections previously applied. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn.

Applicant's surrendering of the original ribboned patent US 5,776,760 in response to the Office action dated 3-27-02 is hereby acknowledged.

INFORMAL EXAMINER'S AMENDMENT

The following informal Examiner's amendment has been done to correct minor typographical errors committed by the applicant in the amendment submitted on 3-19-04. In that amendment applicant failed to recite the first square bracket used to demarcate the text being amended and failed to provide a clean version of the amended claims.

The amendment to the specification and a clean version of the amended claims follow in separate pages.

AMENDMENT TO THE SPECIFICATION

Please amend the paragraph at column 17, lines 14-34, of the specification as follows:

The glyphosate target in plants, the [5-enolpyruvyl-shikimate-3-phosphate] 5-enolpyruvyl- shikimate-3-phosphate synthase (EPSPS) enzyme, is located in the chloroplast. Although glyphosate oxidoreductase activity located in the cytoplasm reduces/prevents glyphosate from reaching the chloroplast in the transgenic plant, directing the glyphosate oxidoreductase enzyme to the chloroplast has been found to further minimize the effects of glyphosate on EPSP synthase. Many chloroplast-localized proteins are expressed from nuclear genes as precursors and are targeted to the chloroplast by a chloroplast transit peptide (CTP) that is removed during the import steps. Examples of such chloroplast proteins include the small subunit (SSU) of Ribulose-1,5-bisphosphate carboxylase (RUBISCO), 5-enolpyruvyl- shikimate-3-phosphate synthase (EPSPS), Ferredoxin, Ferredoxin oxidoreductase, the Light-harvesting-complex protein I and protein II, and Thioredoxin F. It has been demonstrated in vivo and in vitro that non-chloroplast proteins may be targeted to the chloroplast by use of protein fusions with a CTP and that a CTP sequence is sufficient to target a protein to the chloroplast (della-Cioppa et al., 1987).
